No.

Date.

$g_m = \frac{I_C}{V_T}$ $r_\pi = \frac{\beta}{g_m}$ $r_o = \frac{|V_A|}{I_C}$

第三次作业

CH P2 T5~7

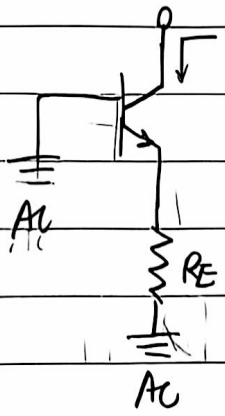

T5 A

T6 AB、C、D

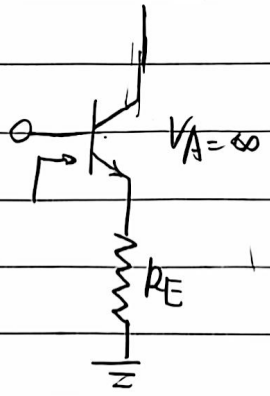

T7 易截止，易饱和

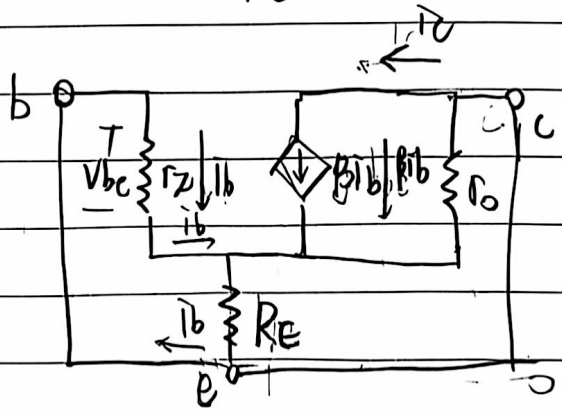

CH P2 T2&4

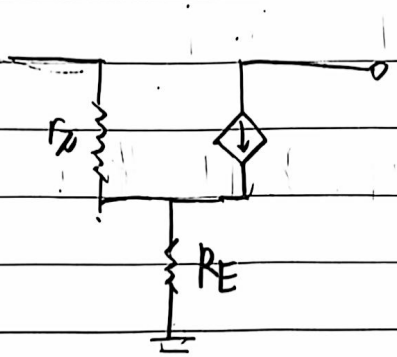

T2

T4 C

$\begin{cases} V_C = (I_C - \beta i_b) r_o + I_C (r_\pi \parallel R_E) \\ i_b r_\pi + (i_b + I_C) R_E = 0 \end{cases}$ $r = r_\pi + (1+\beta) R_E$

$\Rightarrow V_C = (I_C + \beta \frac{R_E I_C}{r_\pi + R_E}) r_o + I_C (r_\pi \parallel R_E)$

$R = \frac{V_C}{I_C} = (1 + \beta \frac{R_E}{r_\pi + R_E}) r_o + r_\pi \parallel R_E \approx (1 + g_m r_o)(r_\pi \parallel R_E)$
